Automatic home generator cost

Made to work with generators that have a Smart Switch Ready port and an L14-30R outlet, the ST Switch is engineered to bridge the gap between traditional portable generators and standby

Quick answer: In 2025, a typical whole house generator installation costs $6,000-$30,000, driven by generator size (kW), brand, transfer switch, electrical upgrades, fuel line/permits, and local labor rates.

Automatic Transfer Switch (ATS) The automatic transfer switch constantly monitors the electric utility power coming into the home. If it detects a break in service, it will automatically disconnect the

Installed Cost Overview (What Really Drives Price) Whole house generator projects bundle the equipment cost (generator + automatic transfer switch) and the installation (site prep, slab, gas

An Automatic Standby Generator Package Unit will provide you with electricity for specific electrical circuits in your home should you lose the utility-supplied electrical power. Both generator systems

On average, a whole house or standby generator (also known as a backup generator) costs between $2,100 and $22,000. Standby generators are permanently connected to your home.

Features Plenty of Power - With 13,000 starting watts and 10,500 running watts, this unit can handle heavy loads, from lights and a refrigerator to a home air conditioner and high amperage power tools.

Automatic generators provide a reliable power backup solution, especially in areas prone to outages or where continuous electricity is vital. When considering the cost of automatic
