

Global Change Infographic The amount of sunlight that is absorbed or reflected by Earth's surface and atmosphere affects the energy budget, the amount of energy available on Earth that drives system

The global battery energy storage system (BESS) market is experiencing strong growth due to multiple converging factors. Increasing integration of renewable energy sources, such as

SHENZHEN, China - March 9, 2026 - PRLog -- As global energy systems continue to transition toward renewable power, hybrid solar inverters are expected to play a key role in the development of solar

BRICS countries are no longer on the sidelines of the clean energy transition - they are driving it. They now account for more than half of global solar power generation. As economies like

The owner of a Walker manufacturing plant that makes electrical components for utility-scale solar energy systems has sold to a global energy infrastructure company. Executives with

China's solar industry is a poster child for the country's economic rise over the last four decades. The output of Chinese solar grew by 76% annually between 2004 and 2013, and by 2019

SHENZHEN, China - March 9, 2026 - PRLog -- As global energy systems continue to transition toward renewable power, hybrid solar inverters are expected to play a key role in the

Growing demand for energy independence and grid resilience is driving the rapid adoption of hybrid solar inverter technology worldwide. SHENZHEN, China - March 9, 2026 - PRLog -- As

Here, wind and solar energy account for 44% of total national electricity generation, which is well above the global average. Renewable energies already covered around 63% of net public electricity

Growing demand for energy independence and grid resilience is driving the rapid adoption of hybrid solar inverter technology worldwide. SHENZHEN, China - March 9, 2026 - PRLog -- As

The rapid expansion of solar capacity in recent years has made it the fastest growing source of new electricity generation. In 2024, global solar output rose by 28% (+469 TWh) compared

Wood Mackenzie powers Puerto Rico domestic violence shelter with solar, energy storage Global energy research, data provider and consultancy firm partners with Let's Share the

Solar additions are expected to rise by 9% and wind by 21%, with solar still adding more capacity in absolute terms. China is projected to account for 66% of global solar capacity and 69%

Global solar energy
