

Protection ip55

Ingress Protection (IP) codes for electrical enclosures in Class 1/DIV 2 and non-hazardous locations An IP (Ingress Protection) rating is used mainly by buyers in Europe to specify the extent of protection

Protection level: IP55, suitable for harsh industrial environments Communication interface: Supports multiple industrial communication protocols, including Ethernet, Profibus, Modbus, etc., ensuring

IP55 is a protection rating that tells you how well an enclosure resists dust and water. The first digit (5) means the product is dust-protected, and the second digit (5) means it can handle water jets from

IP55 vs. IP65: The Main Differences Diving into the nitty-gritty, IP55 and IP65 ratings may seem similar at first glance, but they cater to different levels of protection.

An IP55 rating describes how an enclosure manages dust and water during routine operation, without attempting to create a fully sealed unit. A limited amount of dust is permitted, provided it

IP55 is suitable for areas where complete dust protection is not needed and water exposure is limited to light showers or splashes. IP55-rated devices are sufficient for many indoor, or
